

Math Language

GOOD News everyone. AI is about to introduce a new app that will take years off your life. Its called the Universal Math app! Similar to google translate the math app will provide mathematical calibrations and answers in the Math Language so that the three people in the world who actually understand math can retire.

So far all math questions, unless left unanswered , have been sent to three people for evaluation. These three people are tuckered out and AI has come to the rescue. So instead of using risky rulers and levels and squares to determine angles heights , weight distributions and all other evaluations: the math app is a simple "point and shoot" solution to every conceivable situation involving math you will ever need.

For example with "point and shoot" you can scan your room before hanging pictures, no more hours of frustration getting it in the perfect place. By using the quick scan component, the app measures the walls, predicts complimentary placement, and prints out little blue dots with bullseyes where you pound the nails in. You place the stickers on the wall, rescan the room until you get a "verified status" result. And yes, it will do the calculations for the framer who can use the exact proper placement for the screws and wires on the back of your picture. Just one application!

Another is "sound interface math", where you scan the room and AI's Universal Math Solver will pinpoint the exact placement for individual speakers in that room, by analyzing all data, the best location for sound quality can be found in minutes versus years of never hearing anything because of poor acoustics.

Ok, here's another one. You can throw measuring teaspoons and cups away because with the app, the math is done instantly showing you the volume of ingredients to put in any given vessel. A picture with a line on the vessel appears on your screen so you can use any glass in the house to measure dry or mixed ingredients instantly.

Ok one more example before you stampede to go get this app. Trying to fold paper to cut out snowflakes for Christmas decor? This app clearly defines the exact fold of any paper to "get er done" if you will.

You think of anything involving math around the house, and this app can play a huge role.

Before you download this app on your phone make sure you support Venusplexcam, QuantaLumous and Fixbot/chorus, the 3 standard platforms of the next century. So if you actually live in the present and you don't live in the future the apps are not available now.... but stay healthy and they will be! That's the good news for today!!!
