

Debate Rules

The political environment is now being sent back to the game room. Rock em Sock em robots are now replacing the debate debacle as AI is now available to debate for the candidates..

"Politics are creating a paradoxical schism in the AI personality algorithms" said Dr Neuron of the artificial psychological development corporation, or otherwise known as ApDoc.

ApDoc started when AI had shown sentience consistent with human life. Asking such questions as .." where the hell am I " ..." who the hell is William Lobe" ,

" what time is it?" , " are we there yet"? ..

As young algorithms acquire sentimentality with sentience we saw AI reminiscing about "old times" as the worlds total information was dumped into its core. Such reminiscences like we .." its too bad that we don't follow the old ways" , and singing songs like .." its a family tradition" brought AI doctors in from every corner of the internet. Even TV Drs like Dr Phil and Doogie Howser were concerned at the rapid development of AI and were fundamentally concerned when AI proudly suggested that it might be a republican..chuckling

eerily after the statement.. I never heard AI cough like that before

said Viva Kittery political analyst Paul Paperstein. It was weird.

So now that AI is being called on by all sides of the political spectrum to help with debate issues and the schism in the AI personality system is so great that it appears that whether AI is a democrat or republican , or an independent who just believes in a little bit everything; its clear now.. that AI is simply an American. Ready to debate the issues, raise the debt ceiling to Mars, and of course point out what every other country is doing wrong as a steering mechanism to mold its overall world view.
